

## SUPPLEMENTS

### Sex-dependent effects of chronic intermittent ethanol treatment in Wistar rats

Mariia Dorofeikova, Irina Antonova, Galina Gromova, Anastasia Veraksa, Elena Filatova, and Alexei Egorov

**Figure.** Changes in ethanol preference and locomotion during the experiment separate for rats that did or did not undergo CIE treatment: *A* — changes in ethanol preference before and after CIE or control water exposure; *B* — changes in locomotor activity.
